

## Microsoft 365 multifactor authentication (MFA): Verification via Authenticator app

### On your mac

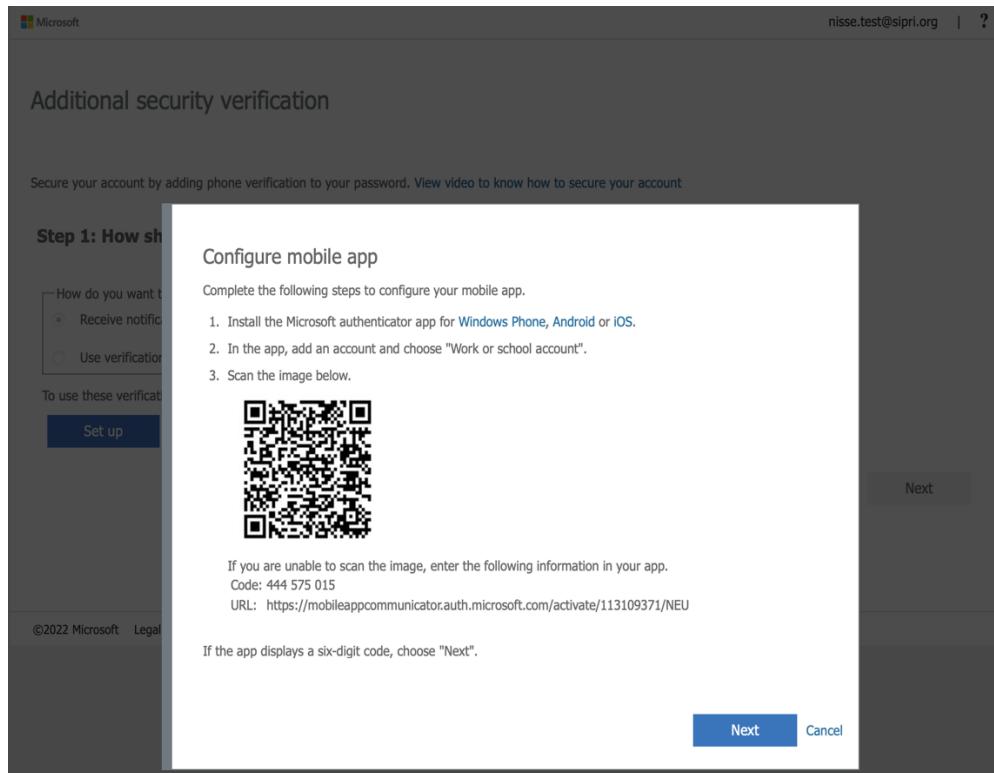

1. Go to <https://login.microsoftonline.com/> and log in like you normally do, using the already added sms-method to verify your account.
2. Go to <https://account.activedirectory.windowsazure.com/proofup.aspx?proofup=1>

Choose how you want to do your second verification from the drop down, and if you want to receive notifications or use app generated codes.

The screenshot shows the 'Additional security verification' step of the Microsoft 365 MFA setup. The user is prompted to choose a verification method for a mobile app. The 'Mobile app' option is selected in a dropdown menu. Below it, a question asks 'How do you want to use the mobile app?' with two options: 'Receive notifications for verification' (selected with a blue radio button) and 'Use verification code' (unchecked). A note below states that these methods require setting up the Microsoft Authenticator app. A 'Set up' button is available to begin this process, with a tooltip 'Please configure the mobile app.' A 'Next' button is located in the bottom right corner.

3. Click Set up - a popup window with a QR-code and instructions will then appear. Follow the instruction – Go to your phone.

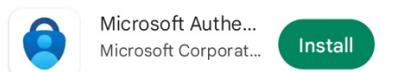

4. On the phone: Open App Store/Play store, locate and download “Microsoft authenticator”.
